## Summary

---

Computer Science and Engineering (Data Science) student with expertise in Python, SQL, data analytics, and machine learning. Experienced in building data-driven applications, interactive dashboards, predictive models, and monitoring systems using modern analytical and visualization tools. Strong problem-solving abilities with hands-on experience in data processing, business insights generation, and deploying practical real-world projects.

## Technical Skills

---

**Programming:** Python, SQL, Java

**Data Analysis & Processing:** Exploratory Data Analysis (EDA), Data Cleaning, Data Wrangling, Feature Engineering, DAX

**Data Science & Machine Learning:** Pandas, NumPy, Scikit-learn, Predictive Analytics, Model Evaluation

**Visualization & Monitoring:** Power BI, Tableau, Grafana, Matplotlib, Seaborn

**Databases & Tools:** MySQL, Git, Docker, MS Excel

## Projects

---

### Real-Time Risk Monitoring System

GitHub | Live

*Python · Docker · Grafana · ClickHouse · yFinance*

- Engineered a real-time market monitoring pipeline processing live stock data for multiple NSE-listed companies using Python and yFinance APIs.
- Built interactive Grafana dashboards with real-time visualizations for stock prices, volatility trends, and risk indicators.
- Integrated ClickHouse to manage and query thousands of time-series market records efficiently for low-latency analytical workflows.
- Automated continuous data ingestion and monitoring processes with scheduled updates to enable near real-time dashboard synchronization.
- Containerized the complete application using Docker, improving deployment consistency and simplifying local environment setup.

### Retail Analytics Dashboard – Maven Market

GitHub | Live

*Power BI · DAX · Power Query*

- Analyzed 10K+ retail transaction records to identify customer purchasing behavior, sales trends, and underperforming categories.
- Designed an interactive Power BI dashboard with KPI cards, drill-through analysis, slicers, and dynamic filtering.
- Created advanced DAX measures including Month-over-Month (MoM) and Year-over-Year (YoY) growth calculations.
- Performed data cleaning and transformation using Power Query to improve reporting consistency and analytical accuracy.

### Crop Recommendation System

GitHub | Live

*Python · Scikit-learn · Pandas · Numpy · Render*

- Developed a machine learning-based recommendation system predicting suitable crops using soil and environmental parameters.
- Trained and evaluated classification models on agricultural datasets to improve crop prediction performance.
- Performed preprocessing, exploratory data analysis, and feature engineering using Pandas and Scikit-learn.
- Built and deployed an interactive application enabling real-time crop recommendation generation.

## Experience

---

### Data Analyst Intern – NullClass

Aug 2025 – Sept 2025

- Developed interactive Power BI dashboards to analyze workforce hiring trends and recruitment insights.
- Implemented dynamic filters, conditional logic, and automated reporting features for improved data exploration.
- Built geospatial visualizations using latitude and longitude data to analyze job distribution across locations.
- Processed recruitment datasets to generate actionable HR and workforce analytics insights.

## Education

---

### Bachelor of Engineering – Computer Science and Engineering (Data Science)

Prof. Ram Meghe College of Engineering and Management, Badnera

Nov 2022 – May 2026

**Relevant Coursework:** Data Structures and Algorithm(DSA), Machine Learning, Artificial Intelligence, DBMS, Statistics
